two depths, 45-49' and 30-34'. Based on test strips we had exceedances at both depths, but we need to rely on pending lab data. I believe that the groundwater discharges to the lake but we observed no seeps. See the attached map for hach field test results.

How deep did we take our gw samples?

Did we get MCL exceedances at that depth?

Do we believe that the gw at that depth discharges to the lake/river?
